DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-10 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims, which claim both an apparatus and the method steps of using the apparatus, are indefinite. The instant claims contain an apparatus and a method of using said apparatus to strip unreacted alcohols for an ester product. These claims are held to be ambiguous and are properly rejected under 35 USC 112, second paragraph.

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. Claims 1-10 rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

The claims are directed to neither a "process" nor a "machine," but rather embrace or overlap two different statutory classes of invention.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-6, 10 rejected under 35 U.S.C. 103(a) as being unpatentable over Silver et al. (US Pat. 5,596,085 in view of Liu et al. US'085 discloses a method of preparing polyol fatty acid polyesters wherein the reaction mixture is containing the alcohol is removed by rotating the reaction mixture in a rotating shell wherein the reaction mixture is flowing on a vertical surface while stripping with a suitable inert gas.

Liu et al. discloses a rotating packed bed used for the stripping of ethanol. The claims differ from the reference by stating that the stripping occurs in a rotating pack bed.

However, it would have been obvious to one of ordinary skill in the art at the time that the invention was made to replace the rotating shell in the process taught in US'085 with a rotating packed bed. US'085 utilizes thin-films produced using a rotating shell that permits the reaction mixture to contact the shell vertically thereby creating a shorter path for the mass transfer of the alcohol from the reaction mixture to the stripping gas. Therefore, to increase the mass transfer of the alcohol from the reaction mixture by using an apparatus that increases the mass transfer of ethanol (alcohol) as taught in US'085 would be obvious.
